

Stripper A-25

Product Description

A-25 Stripper is a water base stripper used for concrete surface preparation. Americrete's A-25 is used to remove paints and sealers prior to using one of Americrete's coating systems. Americrete A-25 can be used on interior or exterior concrete surfaces that have an existing sealer or paint on it.

Primary Uses

A-25 has no odor. Using A-25 eliminates the need to sand the surface. Americrete's A-25 removes most lead and latex paints, enamels and urethanes.

Coverage Rate

A-25 will yield approximately 100-150 square feet per gallon.

Application

Use a broom or squeegee to apply Americrete's A-25 at approximately 1/8" in thickness to entire area. Let A-25 stand for a minimum of 10 – 20 minutes. The longer A-25 stands on the surface the easier removal will be. Removal should be done by using a scraper and water. A-100 may be used to remove any residue. Be sure to power wash the surface to remove any remaining soap and/or residue from surface. Use A-250 Acid Etching Gel to etch the concrete if the pores are not open.
